

## NORFOLK HORN BREEDERS' GROUP - Inspection Sheet

Venue	National Show and Sale of Traditional and Native Breeds
Date	

Inspectors	
------------	--

Lot No	
Reg No	
Ear Tag No	
Name	
Sex	
Age	

	Description	A Good	B Average	C Poor
<b>Condition and Health</b>	Very thin or very fat animals should be marked down. Signs of disease eg footrot or conjunctivitis should be noted and may lead to rejection.			
<b>Conformation and Character</b>	Medium sized - mature ewes 70-75 kg, rams 90-95 kg. Long in leg and body. Forequarters narrow. Relatively fine head with a long straight profile. Alert and active.			
<b>Teeth</b>	Should meet the dental pad correctly and be in good condition for age. Adult teeth emerging should be taken into account. Jaw should be felt for signs of molar disease.			
<b>Feet and Gait</b>	Feet should be neat and black, the animal should be up on its pasterns and walk with a free and easy gait.			
<b>Testicles Udder</b>	Rams - testicles in good condition and of good and equal size. Ewes - two teats and udder in good condition. Signs of having reared lambs in older ewe.			
<b>Horns</b>	Rams - strongly horned with an open spiral - should not grow close to the face. White or black. Ewes - upstanding, possibly with a flick out at ends. White or black.			
<b>Fleece</b>	Short-stapled close white wool. Some black mottling and fibres permissible. Coarse and kempy fleeces undesirable.			
<b>Colour</b>	Face and legs preferably black, but dark brown acceptable, free from wool. Fleece white (see above). Some white mottling where black face joins fleece at cheeks and throat acceptable.			

### Notes

This inspection applies on the day of the sale. When column c is ticked, comments should be made above. Serious flaws will result in the animal being withdrawn from the Sale.
